

DAA LAB-5

1. Find the median of a list of N numbers without sorting the list. Do the complexity analysis of your algorithm.
2. Find the K 'th smallest element in a given list of N numbers without sorting the list. Do the complexity analysis of your algorithm.
3. Implement Quick sort of N random elements store in a file.
4. Implement Heap Sort to sort N randomly generated elements stored in a file. Do the complexity analysis of your algorithm.
